

The World is Open

How Web Technology is Revolutionizing Education

Curtis J. Bonk

0-470-46130-6 | 978-0-470-46130-3 | Cloth | 400 pp. | US \$29.95

AVAILABLE JULY 2009

"In this epic effort Dr. Bonk takes the technologies, the concepts, the future and even the past of distance education and synthesizes it into a comprehensible landscape.

He gives us a window from which we can see it all. Masterful!"

—Glenn R. Jones, Chancellor, Jones International University

Web-based technology has opened up education around the globe to the point where anyone can learn anything from anyone else at any time. You see it every time you Google something, find information in Wikipedia, read the results of an online survey, or watch a YouTube video. To help explain this highly complex situation, Curt Bonk employs his ground-breaking model, "WE-ALL-LEARN," to outline ten key technology and learning trends and shows how technology has transformed educational opportunities for learners of every age and from around the world. The book and its free companion web site are filled with the stories of ordinary learners, as well as of well known technology and education leaders, that reveal the power of opening up the world of learning.
